Case Study: How to use the Learning Garden as a Classroom

Mark your spot

• Using a measuring tape, chalk or tape, mark out 6’ Xs throughout the garden to denote where a student may be located.

• Make your own measuring tool. Grab some rope or twine and a measuring stick. Place a knot every 6’ and add as many knots as students in your class. You can use this to snake around the garden, make circles, and different shapes for your classroom.
